DETAILED ACTION

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: This application teaches a water-based ink comprising (1) a colorant dispersion in which a pigment has been made to be dispersible in water by being enveloped in a polymer or has been dispersed without a dispersant, water, a water-soluble organic solvent a surfactant and nitrilotriacetic acid or salt thereof as a chelating agent (i.e. claims 2-5 and 11-23) and (2) a colorant, water, a water-soluble organic solvent, a surfactant and specific chelating agents as claimed by applicants (i.e. claims 6-8 and 10). The closest prior art of record pertaining to the first water-based ink above is Ichizawa et al., Lin, Yeh et al. and Parliament which all teach an aqueous ink comprising a chelating agent selected from a long list of chelating agents including EDTA and some of applicants specific chelating agents. Applicants have provided evidence in the specification that the ink of the instant claims containing specific chelating agents provides superior storage stability as compared to the inks containing EDTA of Ichizawa et al., Lin, Yeh et al. and Parliament. Accordingly, the claims are allowable over the above prior art. The closest prior art of record pertaining to the second water-based ink above is Lee et al., which teaches an aqueous ink comprising a coloring agent, water, a water-soluble organic solvent, a surfactant and hydroxyethylene di(phosphonic acid) (HEDP) as a chelating agent but fails to teach or fairly suggest the addition of the specific chelating agents as claimed by applicants. Accordingly, the claims are allowable over the above prior art.
